[Nicolas Page](#)

I started my career in game development, where dedication and a self taught mindset allowed me to grow quickly and work on fully shipped titles across multiple platforms. Over time, I realized that the same tools and skills I used to build engaging game experiences could have a much larger real-world impact and that's what drives me today. I now apply everything I learned from game development to build interactive simulations and visualizations that help people understand complex systems in a way that no PDF or video ever could: by letting them interact with it directly.

EMPLOYMENT

Norwegian Promotion Group

Unreal Engine Developer

June 2025 – Current

- Developed and maintained interactive simulation and visualization experiences in UE5 (C++, Blueprints) for client expos and product showcases across diverse industries.
- Served as Perforce administrator and built a multi-platform CI/CD pipeline (Windows, iOS, macOS) with automated builds, instant failure alerts, and reusable project templates.
- Designed responsive UMG interfaces for desktop and mobile, adapting layouts dynamically across device sizes.

Globant

C++ Programmer - Rocket Racing Project

September 2023 – Current

- Unreal Engine 5, C++, Blueprints, UMG, networking, Level Sequencer, Amazon Luna, Game porting, Platform porting, Technical troubleshooting.
- Fully launched on Epic Games Store, PS5/PS4, Xbox Series S/X, Mobile.

Nimble Giant Entertainment

C++ Programmer - Unannounced AAA video game

April 2021 – September 2023

- Unreal Engine 5, C++, Blueprints, networking, enemy systems design and implementation, Unreal Engine 5 Behavior Trees and Environment Query System, Gameplay Ability System, AI systems development for dynamic responses, integration of new AI features in collaboration with producers and game designers, code review, implemented agile practices throughout the project.

C++ Programmer - Quantum League

Nov 2020 – September 2023

- Unreal Engine 5, C++, Blueprints, networking features, Gameplay Ability System (GAS), UI design using UMG, Bug fixing, code review, implemented agile practices throughout the project.
- Fully launched on Steam.

EDUCATION

Universidad Nacional de Tucuman

Bachelor's Degree in Computer Science, 2024.

Associate Degree in Software Development, 2021.

SKILLS

PROGRAMMING LANGUAGES: C, C++, C#.

OTHER TOOLS: Visual Studio, Xcode, Git, Perforce, Subversion, Swarm, Confluence, Jira, Asana.

PLATFORMS & DEPLOYMENT: TeamCity, Jenkins, Apple Developer, App Store Connect, TestFlight.

LANGUAGES: English (fluent), Norwegian (A2 — actively learning)

AVAILABILITY

Ready to start within 2 weeks. Authorized to work in Norway
